Mark your calendars!

Upcoming AABP Conferences

2012
Montreal, Canada • September 20-22

2013
Milwaukee, Wisconsin • September 19-21

2014
Albuquerque, New Mexico • September 18-20

2015
New Orleans, Louisiana • September 17-19

2016
Charlotte, North Carolina • September 15-17
Guidelines for Authors

Two issues of The Bovine Practitioner are published annually, one in the spring and one in the summer. It also serves as a communication medium between bovine practitioner organizations around the world. All manuscripts and communications must be presented in English.

Most articles in the journal are peer-reviewed or refereed. Papers submitted for publication in the peer-reviewed section are anonymously reviewed by three members of the editorial board. In some cases, papers may be reviewed by an outside expert(s) who is not a regular member of the editorial board. Papers published in the peer-reviewed section of the journal will be identified with a “Peer-Reviewed” banner at the top of the first page. Papers rejected by the editorial board for publication as peer-reviewed articles do not automatically qualify for publication in the non-peer-reviewed sections.

Articles published in The Bovine Practitioner are intended to address the needs of bovine practitioners. Types of articles considered appropriate for the journal include research reports, case reports, review articles, retrospective studies and articles describing new techniques.

All papers should begin with an abstract. Research reports should follow with an introduction, materials and methods (including experimental design and statistical analysis), results, discussion and conclusions. At the author’s discretion, results and discussion may be combined.

Case reports should be written to include an introduction, history, clinical findings, appropriate laboratory data, surgical/therapeutic management, discussion and conclusions.

Review articles covering topics important to the practitioner are welcome. They should address more recent advances and bring the reader cutting edge information related to bovine practice or to beef or dairy production.

Papers reporting retrospective studies should include an introduction, clinical implications or objectives of the study, the methodology used to evaluate the data, a section that details the significance of the findings to the practitioner and conclusions.

Two manuscripts and a diskette or CD should be submitted to the editor through the mail or via a parcel delivery service. Manuscripts should be double-spaced, using 12-point Times type and 1-inch margins. Both lines and pages should be numbered. When possible Microsoft Word should be used.

Figures, tables and photographs are welcome. Figures should be numbered on the back: legends for figures should be submitted on a separate sheet of paper. Photographs can be submitted as digital images or prints; prints are preferred over 2x2 slides.

English units of measure should be used for weights, measures and temperature. If the author desires, it is acceptable to follow English units with metric units in parenthesis, i.e., .440 lb (200 kg) steer had a rectal temperature of 101.5°F (38.6°C). When the use of brand names is necessary, they should be listed in footnotes or endnotes, including the name of product, manufacturer, and manufacturer’s city and state.

References to literature cited in the paper must be identified in the text by the use of superscripts. References should be listed in alphabetical order. Suggested style for citations in the reference section is as follows:

All correspondence and manuscripts should be addressed to:

The Bovine Practitioner

“I’m glad to have Vista® back. Our clients are excited to employ it right away in their vaccination programs.”

- Clint Hilt, DVM
Montana

Vista® Once SQ is the most complete respiratory protection available, offering 5-way modified live viral protection in combination with the only avirulent-live culture Mannheimia haemolytica and Pasteurella multocida protection. And it’s backed by respiratory research validating:

- Respiratory duration of immunity of at least:
  - 182 days for Infectious Bovine Rhinitis (IBR)
  - 206 days for Bovine Virus Diarrhea (BVD) Type 1
  - 200 days for BVD Type 2
- Three-day onset of immunity for IBR respiratory protection
- BVD Type 1b cross protection
- BVD Type 2 protection in the face of maternal antibodies

The five-way protection of Vista also is available in combination with the only single-dose Lepto hardjo-bovis protection: Vista 5 VL5 SQ.

For more information about Vista vaccines, talk to your veterinarian or animal health provider.
Most veterinary dreams start long before the training does.

Veterinary dreams may begin at a young age, but exposure to livestock practice early in veterinary school may help shape those dreams and attract future cattle veterinarians. Pfizer Animal Health understands this and offers a host of programs to make this a reality. These include externships and scholarships in partnership with organizations like FFA and the American Association of Bovine Practitioners. As the single largest provider of continuing education among animal health companies, we help make the dream of becoming a cattle veterinarian a reality.
