43RD ANNUAL CONFERENCE
PROCEEDINGS
American Association of Bovine Practitioners

Albuquerque, New Mexico
August 19-21, 2010
RESFLOR GOLD is a broad-spectrum antibiotic that works against the four major bacterial causes of BRD and a non-steroidal anti-inflammatory drug in one.

Ask your Intervet/Schering-Plough Animal Health representative about RESFLOR GOLD.

Watch the video at www.resflorgold.com or scan the barcode to the right using your mobile device and the free app available at http://gettag.mobi

Time-lapse photos were taken of a randomly chosen calf during an actual trial conducted at a Research Facility in Canyon, TX, on October 14, 2009.

For subcutaneous use in beef and non-lactating dairy cattle only. Not for use in female dairy cattle 20 months of age or older or in calves to be processed for veal. The effects of flunixin and flunixin on bovine reproductive performance, pregnancy, and lactation have not been determined. When administered according to the label directions, RESFLOR GOLD may induce a transient local reaction in the subcutaneous and underlying muscle tissue. Full product information on page 274.

Resflor Gold is property of Intervet International B.V. or affiliated companies or licensees and is protected by copyrights, trademarks and other intellectual property laws. Copyright © 2010 Intervet International B.V. All rights reserved. 

The correlation between in vitro susceptibility data and clinical effectiveness is unknown. 

Exhibits bactericidal activity against some strains of Mannheimia haemolytica and Histophilus somnus. FES 41B.

Prudent Drug Usage Guidelines

The production of safe and wholesome animal products for human consumption is a primary goal of members of the AABP. In reaching that goal, the AABP is committed to the practice of preventive immune system management through the use of vaccines, parasiticides, stress reduction and proper nutritional management. The AABP recognizes that proper and timely management practices can reduce the incidence of disease and therefore reduce the need for antimicrobials; however, antimicrobials remain a necessary tool to manage infectious disease in beef and dairy herds. In order to reduce animal pain and suffering, to protect the economic livelihood of beef and dairy producers, to ensure the continued production of foods of animal origin, and to minimize the shedding of zoonotic bacteria into the environment and potentially the food chain, prudent use of antimicrobials is encouraged. Following are general guidelines for the prudent therapeutic use of antimicrobials in beef and dairy cattle.

1. The veterinarian’s primary responsibility to the client is to help design management, immunization, housing and nutritional programs that will reduce the incidence of disease and the need for antimicrobials.

2. Antimicrobials should be used only within the confines of a valid veterinarian-client-patient relationship; this includes both dispensing and issuance of prescriptions.

3. Veterinarians should properly select and use antimicrobial drugs.
   a. Veterinarians should participate in continuing education programs that include therapeutics and emerging and/or development of antimicrobial resistance.
   b. The veterinarian should have strong clinical evidence of the identity of the pathogen causing the disease, based upon clinical signs, history, necropsy examination, laboratory data and past experience.
   c. The antimicrobial selected should be appropriate for the target organism and should be administered at a dosage and route that are likely to achieve effective levels in the target organ.
   d. Product choices and regimens should be based on available laboratory and package insert information, additional data in the literature, and consideration of the pharmacokinetics and pharmacodynamics of the drug.
   e. Antimicrobials should be used with specific clinical outcome(s) in mind, such as fever reduction, return of mastitic milk to normal, or to reduce shedding, contagion and recurrence of disease.
   f. Periodically monitor herd pathogen susceptibility and therapeutic response, especially for routine therapy such as dry cow intramammary antibiotics, to detect changes in microbial susceptibility and to evaluate antimicrobial selections.
   g. **Use products that have the narrowest spectrum of activity and known efficacy** in vivo against the pathogen causing the disease problem.
   h. Antimicrobials should be used at a dosage appropriate for the condition treated for as short a period of time as reasonable, i.e., therapy should be discontinued when it is apparent that the immune system can manage the disease, reduce pathogen shedding and minimize recurrence of clinical disease or development of the carrier state.
   i. Antimicrobials of lesser importance in human medicine should be used in preference to newer generation drugs that may be in the same class as drugs currently used in humans if this can be achieved while protecting the health and safety of the animals.
   j. Antimicrobials labeled for use for treating the condition diagnosed should be used whenever possible. The label, dose, route, frequency and duration should be followed whenever possible.
   k. Antimicrobials should be used extra-label only within the provisions contained within AMDUCA regulations.
   l. Compounding of antimicrobial formulations should be avoided.
   m. When appropriate, local therapy is preferred over systemic therapy.
   n. Treatment of chronic cases or those with a poor chance of recovery should be avoided. Chronic cases should be removed or isolated from the remainder of the herd.
   o. Combination antimicrobial therapy should be discouraged unless there is information to show an increase in efficacy or suppression of resistance development for the target organism.
   p. Prophylactic or metaphylactic use of antimicrobials should be based on a group, source or production unit evaluation rather than being utilized as standard practice.
   q. Drug integrity should be protected through proper handling, storage and observation of the expiration date.

4. Veterinarians should endeavor to ensure proper on-farm drug use.
   a. Prescription or dispensed drug quantities should be appropriate to the production-unit size and expected need so that stockpiling of antimicrobials on the farm is avoided.
   b. The veterinarian should train farm personnel who use antimicrobials on indications, dosages, withdrawal times, route of administration, injection site precautions, storage, handling, record keeping and accurate diagnosis of common diseases. The veterinarian should ensure that labels are accurate to instruct farm personnel on the correct use of antimicrobials.
   c. Veterinarians are encouraged to provide written guidelines to clients whenever possible to describe conditions and instructions for antimicrobial use on the farm or unit.
Table of Contents

GENERAL SESSIONS
- Bovine Veterinary Education: Getting it Wrong and Getting it Right
  John U. Thomson ............................................................. 1
- Factors Influencing Bovine Respiratory Disease in Stocker and Feeder Cattle
  Bob Smith ........................................................................ 10
- Approaches to Enhancing the Gastrointestinal Health of Calves
  Sheila M. McQuirk ............................................................ 16
- Bovine Field Restraint: Physical and Chemical Techniques for Balanced Restraint
  Matt D. Miesner ............................................................... 22
- Repair of Fractures in the Field
  David C. Van Metre, David E. Anderson ............................. 26
- Management of Cull Feeder Cattle
  Thomas A. Edwards .......................................................... 32
- Feedlot Heat Stress Checklist
  Dee Griffin ................................................................. 35
- Recommendations for Castration and Dehorning of Cattle
  Hans Coetzee ................................................................. 40
- The 30/30 Club: Metabolic Breaking Point, or Fulfilling Genetic Potential – Have We Forgotten about Animal Welfare?
  Nigel B. Cook .................................................................... 46
- The Role of Bovine Veterinarians in the Future
  John U. Thomson, Daniel U. Thomson ................................. 53

BEEF SESSIONS
- Dairy Production: 1940’s through Today
  Jude L. Capper, Roger A. Cady, Dale E. Bauman ........................ 54
- Beef Production: Changes Over the Years
  Ben Wileman, Dan Thomason .................................................. 61
- Understanding a Diversified Livestock Veterinary Business
  Daryl Olsen ........................................................................ 69

FEEDLOT SESSIONS
- Tri-County Steer Carcass Futurity Data
  Darrell Busby ..................................................................... 77

DAIRY SESSIONS
- Vaccination of Dairy Cattle
  Victor Cortese .................................................................... 82
- Treat the Treatable and Manage the Rest: Managing the Bulk Tank Somatic Cell Count and Reducing Treatment Costs
  Frank Welcome, Mike Zurakowski, Gerald Welch, Ynte Schukken .................................................. 90
- Assisting Dairies in Mastitis Culturing On-farm
  Sarah Wagner ...................................................................... 97
- Creating the Physical Environment for Transition Cow Success
  Kenneth V. Nordlund ........................................................ 100
- Tips and Tools for Troubleshooting Nutritional Management on Dairy Herds
  Garrett R. Oetzel ............................................................... 105
- Nutritional Management of the Dairy Heifer to Maximize Growth and Productivity
  Robert B. Corbett ............................................................. 110
- Contract Rearing Programs for Replacement Dairy Heifers
  Don Gardner ....................................................................... 121
- Clinical Mastitis: The First Eight Days
  Jerry R. Roberson ............................................................ 124

AABP-AASRP JOINT SESSIONS
- Working with Small Ruminant Shows and Sales
  Joan Dean Rowe ............................................................... 134
- Odd Reproductive Problems of Small Ruminants
  Jerry R. Roberson ............................................................ 139
- Management of the Severely Parasitized Small Ruminant
  Jerry R. Roberson ............................................................ 142
- Buck Health Management
  Joan Dean Rowe ............................................................... 145
- Three Interesting Cases and Small Ruminant Tips
  Jerry R. Roberson ............................................................ 149

VETERINARY TECHNICIAN PROGRAM
- Disposition – Convenience Trait or Economically Important?
  Darrell Busby ..................................................................... 152
- Talking with Friends and Clients about their Concerns with Animal Agriculture
  David R. Smith, Rachael G. Slattery ........................................ 162
- Roles for Veterinary Technicians in Preventing Metabolic Diseases in Dairy Herds
  Garrett R. Oetzel ............................................................... 166
- Injection Sites – a Look Under the Hide
  John Schnackel .................................................................. 170
- Health Strategies for Organic Dairy Farms
  Hubert J. Karkeman .......................................................... 173
- Small Ruminants for Technicians
  Jerry R. Roberson ............................................................ 176
- A Day in the Life of a Large Animal Veterinary Technician
  David P. White .................................................................. 179
- Lameness Wetlab: Hoof Anatomy and Basic Hoof Trimming
  Jason B. Osterstock .......................................................... 180

RESEARCH SUMMARIES 1
- Duodenal Obstruction Caused by Volvulus of the Duodenal Sigmoid Flexure in Dairy Cattle
  S.R. Vogel, S. Nichols, S. Buczinski, M. Babkine, M. Veillette, A. Desrochers ................................................. 183
- Lipid Mobilization in Transition Dairy Cows Alters Endothelial Inflammatory Response
  G.A. Contreras, L.M. Sordillo ................................................ 184
- Comparison between Individual and Pooled Samples of Non-esterified Fatty Acids (NEFA) and B-hydroxybutyrate (BHBA) in Transition Dairy Cows to Determine Herd Alarm Level Status
  Paula Ospina, Daryl Nydam, Tracy Stokol, Thomas Overton .................................................................................. 185
- Effect of Paste or Wrap Oxytetracycline Treatment on Papillomatous Digital Dermatitis
- The Effect of Postparturient Uterine Douching on the Risk for Clinical Metritis in Lactating Holstein Dairy Cows
- Effect of Nutritional Plane on Health, Performance, and Muscle Metabolism in Neonatal Dairy Calves
- Association of Coagulase Negative Staphylococcal Species and Milk Somatic Cell Count of Cows from the Canadian National Cohort of Dairy Farms
  J. Perry, J. Middleton, S. Dufour, D. Scholl, C. Calloway, S. Andersen ................................................................. 189
• Variation in Daily Shedding Pattern of *Staphylococcus aureus* in Naturally Occurring Intramammary Infections

• Variation in Weekly Shedding Pattern of *Staphylococcus aureus* in Naturally Occurring Intramammary Infections

• Efficacy of Intramammary Extended Therapy Using Ceftiofur (Spectramast® LC) against Clinical Mastitis of Holstein Cows
  G. Truchetti, J.P. Roy, L. DesCoteaux, E. Bouchard, M. Ducet, D. Scholl

• Relationship between Serum Total Protein and Serum IgG in Holstein Calves Fed Either a Lactal- or Plasma-derived Colostrum Replacer
  N. Place, A. Bents, K. Leslie, B. Nelson, D. Haines, S. Godden

• Effect of Feeding Bovamine® Probiotic on Passive Transfer of Immunoglobulin G in Newborn Calves
  K. Brakefield, S. Godden, J. Fetrow, P. Rapnicki, R. Bey, D. Haines

• The Effect of Injectable Butylphosphan and Cyanocobalamin on Postpartum Serum Beta-Hydroxybutyrate, Calcium, and Phosphorus Concentrations in Dairy Cattle

RESEARCH SUMMARIES 2

• Feedlot Beef Cattle Health and Well-Being Recommendations

• Comparative Efficacy of Two Ivermectin Pour-on Anthelmintics in Beef Steers in a Commercial Feedyard

• Characterization of Specific Passive Immunity Stimulated by Vaccination of Beef Cows Grazing Native Range with *E. coli* O157:H7-SRP®

• *E. coli* O157:H7 Shedding in Beef Calves Vaccinated with *E. coli* O157:H7 SRP® Vaccine Born to Cows Vaccinated Prepartum with *E. coli* O157:H7 SRP® Vaccine

• Is *Mycoplasma bovis* in Bedding Sand Transmissible to Naïve Dairy Calves?
  D.J. Wilson, A. Justice-Allen, G. Goodell, T.J. Baldwin, R.T. Skirpistunas, K.B. Cavender

• Descriptive Epidemiology of Bovine Tuberculosis in Michigan (1975-March 2010); Lessons Learned

• Juvenile Vaccination against *Mycobacterium avium* ssp *paratuberculosis* Impacts Incidence and Cull Rates
  K.J. Esch, R.L. Royer, C.O. Thoen

• Detection of *Mycobacterium avium* paratuberculosis in Naturally Exposed Dairy Calves
  M.W. Bolton, R.B. Pillars, D.L. Grooms, W.A. Mauer, J.B. Kaneene

• Case-control Study: Productivity and Longevity of Dairy Cows that Tested Positive for Infection with *Mycobacterium avium* paratuberculosis as Heifers Compared to Age-Matched Controls
  R.B. Pillars, M.W. Bolton, D.L. Grooms

• Use of a New Bulk Tank Milk Test to Measure Prevalence of Johne’s Disease in Utah and the Intermountain West
  D.J. Wilson, K. Rood, C. Wareham, T.M. Byrem

• Development of a Bulk-tank Surveillance Program for Johne’s Disease in New York Dairy Farms
  Y.H. Schukken, T.M. VanSlyke, N. Djuranovic

• Multi-level Interpretation of the New IDEXX M. *paratuberculosis* ELISA on Serum and Milk Based on Likelihood Ratio Analysis
  M.T. Collins, N. Djuranovic, Lisa Estey, Valerie Leathers

• Is Serum Total Protein a Useful Predictor of Clinical Johne’s Disease in Dairy Cows that are ELISA-positive for *Mycobacterium avium* ssp *paratuberculosis*?
  J. Kalthoff, S. Godden, S. Wells, J. Fetrow, Luis Espejo

• Practice Makes Perfect: Compressing a Decade into a Day Using Computer Gaming to Learn Johne’s Disease Control Program Design
  M.T. Collins, J. McDonald, E.A. Horn, C.K. Worrell, B. Longoria, J. Cheetham

RESEARCH SUMMARIES 3

• Randomized Clinical Field Trial of the Effect of Preweaning Viral Vaccination on the Incidence of Respiratory Disease in Dairy Heifer Calves Up to Four Months of Age
  C. Windeyer, S.J. LeBlanc, K.D. Lissimore, D.C. Hodgins, S.M. Godden, K.E. Leslie

• Effect of BRD Following First Movement to Group Housing on Survival to First Lactation, Dyspnea Rates and Age at First Calving in Commercial Dairy Heifers

• Application of Sentinel Serology in a BVDV Eradication Program
  E.M. Corbett, D.L. Grooms, S.R. Bolin, B. Bartlett

• Qualification and Quantification of Bacterial Pathogen Load in Acute Bovine Respiratory Disease Cases
  C. Roof, M. Apley, D.S. McVey, D.G. McClary

• Detection of Bovine Respiratory Syncytial Virus Using Commercial Human Respiratory Syncytial Virus Rapid Immunomigration Assays
  N. Barbaj, C. Passmore, R. Urban, R. Maes, D. Grooms

• Predicting Cumulative Risk of Bovine Respiratory Disease Complex using Feedlot Arrival Data and Daily Morbidity and Mortality Counts
  A.H. Babcock, D.G. Renter, B.J. White

• Field Study: Exposure to Bovine Viral Diarrhea Virus Pre-weaning Mitigates the Effect of Constant BVDV PI Exposure During the Early Feeding Period

• Genetic and Antigenic Characterization of Bovine Viral Diarrhea Field Isolates
  B.M. Hause, R.F. Bey, D.L. Stine, R.R. Simonson

• Bovine Viral Diarrhea Virus: Genetic Analysis and Signalment of Persistently Infected Dairy Calves Detected in the Upper Midwestern United States
• Analysis of the Stability of Rumen pH Measurements

• Bovine Neonatal Pancytopenia (BNP) – Emerging Disease or Transient Tragedy?
  A. Friedrich, G. Rademacher, A. Carlin, A. Assad, A. Hafner-Marx, W. Klee

• Patterns of Pen Stocking Density on Drylot and Freestall
  Production Tour at Texas A&M University

• Agronomic Biofortification with Selenium: Effects on Whole-blood Selenium and Humoral Immunity in Beef Cattle

• Efficacy of Intrauterine Dextrose Therapy on Fertility of Lactating Dairy Cows Diagnosed with Clinical Endometritis
  T. Brick, S. Bas, F. Silveira, J. Daniels, C. Pinto, Rajala-Schulz, D. Sanders, G. Schuenemann

• Evaluation of a Commercial Vaccine to Protect Developing Fetuses from Natural Challenges with Bovine Viral Diarrhea Virus and Bovine Herpesvirus 1

• Passive Transfer of Antibodies in Pregnant Cattle Following Vaccination with Bovi-Shield®
  J. Stegner, G. Alaniz, T. Meinert, G. Gallo, V. Cortese

• Evaluation of a Questionnaire on Management Practices as a Diagnostic Tool to Determine Mycobacterium avium subsp. paratuberculosis Infection Status in Quebec Dairy Herds
  S. Buczinski, J.P. Roy, G. Fecteau, O. Labrecque, P. Aubry

• Evaluation of a Questionnaire on Management Practices as a Diagnostic Tool to Determine Mycobacterium avium subsp. paratuberculosis Infection Status in Queensland Dairy Herds

• Validation of a New IDEXX Johne’s Antibody ELISA for Use on Milk Samples
  Jill McCormick, Sophie Chebanier, Nevena Djuranovic, Lisa Estey

• Risk Factors, Impacts, and Therapy for Endometritis in Dairy Cows
  K. Dubuc, T.F. Duffield, K.E. Leslie, J.S. Walton, S.J. LeBlanc

• Risk Factors, Impacts, and Therapy for Endometritis in Dairy Cows
  J. Dubuc, T.F. Duffield, K.E. Leslie, J.S. Walton, S.J. LeBlanc

• Effect of Tail Docking on Health and Performance on Feedlot Calves Housed in Confined Slotted Floor Facilities
  D. Grooms, J. Schweinroder, J. Swanson, K. Metz, S. Rust

• Effect of Tail Docking on Health and Performance on Feedlot Calves Housed in Confined Slotted Floor Facilities
  D. Grooms, J. Schweinroder, J. Swanson, K. Metz, S. Rust

• Agronomic Biofortification with Selenium: Effects on Whole-blood Selenium and Humoral Immunity in Beef Cattle

• Dynamicas of Tritrichomonas foetus Infection in Bulls Used for Natural Service in a Florida Dairy Farm
  G. Pena, C. Risco, O. Rae

• Generation of Histophilus somni Mutants Deficient in Biofilm Formation or Attenuated in Virulence
  I. Sandal, M. El-Hadidy, T.J. Inzana

• Bovine Viral Diarrhea Virus (BVDV) in the United States, France, Spain and the United Kingdom: Vaccination and Testing Practices, Cost, Satisfaction and Impact
  Frank Winslow, Christoph Egli, Caroline Newcomb, Nevena Djuranovic, Peter Welles

• Survey of Management Practices in Indiana Dairy Farms Related to Bovine Viral Diarrhea Virus Control
  M. Negron, E. A. Raizman, R. Pogranichniya, M. Hilton, M. Levy

• Characterization of Testing and Longitudinal Prevalences for PI-BVDV Cattle in the Beef Industry
  E.T. Stevens, D.U. Thomson, N. Lindberg

• Reproductive Impact Following Controlled Introduction of Bovine Viral Diarrhea Virus

• Comparison of Pregnancy Diagnosis by Transrectal Ultrasonography at 28-34 Days after AI and Rectal Palpation at 35-41 Days after AI on Pregnancy Retention at 61-67 Days after AI
  R.V.V. Pereira, L.S. Caixeta, D.V. Nydam, C.L. Guard

• Evaluation of a Commercial Vaccine to Protect Developing Fetuses from Natural Challenges with Bovine Viral Diarrhea Virus and Bovine Herpesvirus 1

• Passive Transfer of Antibodies in Pregnant Cattle Following Vaccination with Bovi-Shield®
  J. Stegner, G. Alaniz, T. Meinert, G. Gallo, V. Cortese

PULMO-GUARD® PHM-1 — The proven leader in pasteurellosis protection

PULMO-GUARD PHM-1 bacterin toxoid helps reduce disease caused by *M. haemolytica* and *P. multocida* in two ways. It stimulates the calf’s immune system to make antibodies that attack the bacteria plus it stimulates the production of antibodies that neutralize the leukotoxins produced by *M. haemolytica*.

THE PULMO-GUARD FAMILY OF PRODUCTS NOW AVAILABLE from AgriLabs

PULMO-GUARD PHM-1 — Single-dose application recommended for the vaccination of healthy, susceptible cattle as an aid in the prevention of respiratory disease caused by *Mannheimia haemolytica* and *Pasteurella multocida*.

PULMO-GUARD PH-M — For the use in cattle 30 days of age or older as an aid in the prevention of respiratory disease due to *M. haemolytica* and *P. multocida*.

EXPRESS® 5-PHM — For vaccination of healthy, susceptible cattle 30 days of age or older as an aid in the reduction of respiratory diseases caused by IBR, BVD Types 1 and 2, PL3, BRSV, *M. haemolytica* and *P. multocida*.

PROVIDING PROVEN PERFORMANCE AND PROTECTION.
