President’s Reception

At the end of the Conference, a reception was held to honor Dr. Mike Apley for his service as President of the AABP in 2017 and 2018.
Sponsored by Merck Animal Health, the final event of the week was A Taste of the Southwest. There was lots of fun and food, and offered the conference attendees the opportunity to wind down and relax with fellow veterinarians after a long week of continuing education.
THE AMERICAN ASSOCIATION OF BOVINE PRACTITIONERS

would like to express special appreciation to the following for their
generous financial support of the 51st Annual Conference.

A Boehringer Ingelheim Company
Extended-Release Injectable Parasiticide
5% Sterile Solution
NADA 141-327, Approved by FDA for subcutaneous injection
For the Treatment and Control of Internal and External Parasites of Cattle on Pasture with Persistent Effectiveness

CAUTION: Federal law restricts this drug to use by or on the order of a licensed veterinarian.

INDICATIONS FOR USE
LONGRANGE, when administered at the recommended dose volume of 1 ml per 110 lb (50 kg) body weight, is effective in the treatment and control of 20 species and stages of internal and external parasites of cattle.

WARNINGS AND PRECAUTIONS

Withdrawal Periods and Residue Warnings
Animals intended for human consumption must not be slaughtered within 48 days of the last treatment. This drug product is not approved for use in female dairy cattle 20 months of age or older, including dry dairy cows. Use in these cattle may cause drug residues in milk and/or in calves born to these cows. A withdrawal period has not been established for pre-ruminating calves. Do not use in calves to be processed for veal.

Environmental Hazards
Not for use in cattle managed in feedlots or under intensive rotational grazing. Such an environment may result in a significant reduction in average weight gain when compared to the group tested at no use. Treatment-related lesions observed in most cattle vaccinated the product included swelling, hyperemia, or necrosis in the subcutaneous tissue of the skin. The administration of LONGRANGE at 3 times the recommended dose level of 5 mg eprinomectin per kg body weight (1 ml per 110 lb body weight).

Other Warnings: Underdoing and/or subtherapeutic concentrations of extended-release anthelmintic products may encourage the development of parasite resistance. It is recommended that parasite resistance be monitored following the use of any anthelmintic with the use of a fecal egg count reduction test program.

TARGET ANIMAL SAFETY
Clinical studies have demonstrated the wide margin of safety of LONGRANGE® (eprinomectin). Overdosing at 3 to 5 times the recommended dose resulted in a statistically significant reduction in average weight gain when compared to the group treated at no use. Treatment-related lesions observed in most cattle vaccinated the product included swelling, hyperemia, or necrosis in the subcutaneous tissue of the skin. The administration of LONGRANGE at 3 times the recommended therapeutic dose had no adverse reproductive effects on beef cows at all stages of breeding or pregnancy or on their calves.

STORAGE
Store at 77° F (25° C) with excursions between 59° and 86° F (15° and 30° C). Protect from light. Made in Canada. Manufactured for Merial, Inc., Duluth, GA, USA.

That's LongRange® (eprinomectin).

LONGRANGE lasts up to 150 days. That means producers can deworm when it's convenient for them and it's still working when it actually makes sense to deworm - even if that's two weeks or two months later. The secret is the TheraPhase® formulation with two peaks of effectiveness. It's like multiple, strategically timed applications in a single dose.

Now is the time to prescribe LONGRANGE. theLONGRANGElook.com

Caution: Federal law restricts this drug to use by or on the order of a licensed veterinarian. Warnings and Precautions: For use in cattle only, not for use in humans or other animal species. Keep out of reach of children. Not for use in breeding bulls, or in calves less than 3 months of age. Not for use in cattle managed in feedlots or under intensive rotational grazing. Not for use in female dairy cattle 20 months of age or older, including dry dairy cows, or in veal calves. Post injection site damage (e.g., granulomas, necrosis) can occur; these reactions have disappeared without treatment. Not for intravenous or intramuscular use. Do not underdose. Do not treat within 48 days of slaughter.

Dependent upon parasite species, as referenced in FOI summary and LONGRANGE product label.
