Ruffed Pheasants

PART 2
of a two-part article
by Francis Billie
Temple City, California

Golden Pheasant
(Chrysolophus pictus)

There are two species in this genus. The Golden Pheasant (Chrysolophus pictus) and the Lady Amherst’s Pheasant (Chrysolophus amherstiae). These two pheasant species are among the most beautiful and certainly are the most popular of all game birds. The Golden Pheasant and the Amherst’s Pheasant interbreed freely in captivity. The resulting crosses are completely fertile. This type of breeding should not be done, as it is doubtful many pure specimens of either species remain here in the United States. This was true until a few years ago, when the San Diego Zoo was able to import some new, pure bloodlines from China.

Few Females

Wild-caught male Golden Pheasants from central China still reach the bird market in Hong Kong from time to time. Female Golden Pheasants are seldom ever seen, possibly because of their drab coloration.

Display

The ruff can be spread like a fan across either side of the bird’s head and neck. In a “full” display, the crest is raised and the ruff widely spread, so it hides the sides of the neck and head nearest the hen bird. The male’s bright eye peers intently at the hen, over the upper edge of his ruff. He tilts his body toward the hen with the nearest wing slightly lowered and the other side raised. His tail tilts and spreads vertically. The scarlet tail feathers are very conspicuous in this position. If the hen stands still, the cock holds his position until she moves. When the hen moves, the cock jumps around to present the opposite side. This display is a remarkable performance.

Description

Male

Female

Three Mutations

There are three known mutations and there is a possibility that a fourth exists.

The Dark-throated Golden Pheasant

These birds are similar to the Red Golden Pheasant but are deeper in color. Face, throat and upper breast: smoky black. No trace of metallic green, which indicates Amherst blood. Central rectrices: barred, not spotted. Soft parts: darker yellow and sometimes blackish. Female: much the same as the Golden Pheasant, except the bird is much darker in color.

For the Life of your Bird

ROUDYBUSH

* Handfeeding Formulas for Baby Birds.
  - Psittacines  - Nectivores
  - Squab  - Wildlife Rehab.

* Maintenance Pellets and Crumbles.

* Breeder Pellets and Crumbles.

* Nectars

* Medicated Pellets and Crumbles.

These convenient foods have been formulated based on data from university research. The handfeeding formulas just mix with warm water. With pellets and crumbles there is no expense and mess due to seed hulls, and there is good nutrition in every bite. All of our products exclude animal and fish byproducts to eliminate potential sources of gram negative bacteria.

Let Tom Roudybush, one of the world’s leading pet bird nutritionists, be your bird’s nutritionist.

Golden pheasant (Chrysolophus pictus)

The Yellow Golden Pheasant

**Description**

**Head and crest:** golden yellow. **Ear:** orange. A similarity to the normal Golden is the two black and blue stripes.

The most remarkable difference between this mutant and the regular form involves the total substitution on the wings of yellow for scarlet; red and dark brown, for the blue of the wing primaries. **Lower parts:** light straw color, with all lower parts being yellow. **Female:** similar pattern, with more or less stripes, or speckled with black, straw colored, striped and spotted with a pale brown.

**Salmon Golden Pheasant**

Birds of this type were developed by breeding the Dark-throated Golden and Yellow Golden Pheasants.

**Description**

Salmon Golden Pheasants are similar to the Yellow Golden Pheasant with two distinct differences. **Central tail rectrices:** a striped pattern like the dark throated Golden Pheasant. **String:** much lighter in color. **Breast and lower portions of the bird:** salmon or orange colored instead of lemon yellow. **Female:** dark tobacco color.

The other Golden Pheasant that I have heard about is a "cinnamon", or brown golden. There is no standard for such a bird.

All of the Golden Pheasants are hardy. They are relatively easy to keep under aviary conditions. They will do well with a mixed collection of non-competing birds.

**Adult Males Will Fight**

Two or three female pheasants can be run with each male. However, adult males will fight if kept together. It is possible to maintain a group of males in a large area with no females present. Plenty of cover must be provided. There may be some fighting in the spring, but it will not usually be serious. Such a group makes a wonderful show.

**Plumage in Second Year**

Some young Golden Pheasants will breed in the first year, although these birds will not assume adult plumage until the second year.

First year chicks, although small, are easy to rear on the usual pheasant starter crumbs.

**My First Birds**

Golden Pheasants were my very first aviary birds. I’ve now had the species for 55 years and I have always enjoyed them.

I keep both Golden and Amherst’s Pheasants with other types of birds. Normally they will do quite well. Included with the birds I keep are doves (not ground doves), rosellas, ringnecks, cockatiels and lovebirds. These birds should be kept in medium sized, planted cages. Pheasants do well in mixed collections and they add a lot of color to your aviary.
There is no finer formula. There is no better value. There is no better substitute. There are no “Secrets”. Just plain nutritional Facts and RESULTS! Tried, proven and used around the world by leading Aviculturists. Professional Bird Breeders; Bird Owners; Bird Lovers; Doctors of Veterinary Medicine; Bird Clinics and Bird Hospitals for over 15 years. Carefully formulated, using the finest and purest raw materials available, you will note that we are serious about your Bird’s beauty, breeding, petability, Good Health and of course profitability. Compare our list and potency of natural ingredients to any other. We refuse to use any modifying chemicals or preservatives. Compare the nutritional values for your money. It is still the best buy! (In fact it will save you money!). “THERE IS NO SUBSTITUTE FOR THE BEST!”

Available in the following forms:

1. **Super Preen Fine Powder form:** This fine powder form is the basic ingredient in all of our nutritional products for birds. It also happens to be the favorite basic ingredient in the bird food formulas and recipes for many of the top bird breeders around the world. The powder may also be used directly on your bird’s favorite mixture of food, seeds or fruit. Guaranteed to build better birds naturally.

2. **Super Preen Seedlets:** are created by firmly bonding Super Preen Powder to the finest grade of Millet seed available. Approximately 60% Super Preen Powder by weight. Seedlets make it easy to please any size bird. Great convenience!

3. **Super Preen Nuggets:** are another Super Preen Covered Product created by coating Canadian Peas with 50% Super Preen Powder by weight. The better and easier to feed your larger flocks like the Parrots, Cockatoos, Racing Pigeons.

4. **Super Preened Parakeet-Budgie Seed Mix:** is an irresistible ready-to-eat combination of Millet, Canary seed and oat groats, firmly coated (dry...no oily mess) with 5% Super Preen Powder. It will make your canaries singing, shining and showing off.

5. **Super Preened Canary Seed Mix:** a high percentage of the finest Canary seed with Flax and rape mix coated with 5% Super Preen Powder to get your canaries singing, shining and showing off.

6. **Super Preened Finch Seed Mix:** a premium quality grade of Finch seed mix coated with 5% Super Preen Fine Powder to enhance & enrich the daily diet of Finches.

7. **Sunday Treats:** for Cockatoos. Parrots. (and Play Birds) are great training aids for your feathered family members. We use only the finest human food grade quality peanuts and raisins, coated with 5% Super Preen Powder to make a healthy treat and a healthy reward anytime...you communicate with your feathered friends. Sunday Treats are beyond compare. There is nothing like it. A reward of Thanks is sure to come your way.

8. **Santa Snacks:** a Natural “Spice” coated with Super Preen for your Parrots & Cockatoos (Budgies go for it too). Imported from the Tropics this Natural Santaka Chili Pod is a Natural Food Tonic for jungle Parrots in particular. A New exciting dimension of Natural Nutrition for your Pet Parrot!

9. **Super Gritties:** entire spectrum of 12 Natural Essential Minerals plus 14 Natural Trace Minerals plus Vitamin D-3 & A to ensure absorption of the most important Mineral...CALCIUM, all coated on small “Calcium-Rich” Oyster Shells plus smallest amount of washed Aquarium Gravel. No dust. No sand fillers. Almost 100% digestible. Supplies 33% Calcium.

10. **Super Mini Gritties:** same Natural Nutritional Mineral factors as SUPER GRITTEES except Minerals are coated on small washed Aquarium gravel beads for small birds (such as Canaries) to swallow directly without crunching.

11. **Super Minestrone Powder:** 100% digestible Mineral blend powder of 12 Natural Essential Minerals plus 14 Natural Trace Minerals with Vitamin D-3 & Vit. A. A Fine Powder form that can be sprinkled on Food for Birds that require extra Calcium in particular.

To understand why your birds are going to sparkle and shine and come alive before your eyes. Scan and compare this guaranteed analysis of the ingredients contained in every pound (454 grams) of Super Preen Powder.
